

PROACTIVE CYLINDER MANAGEMENT

SPECIFICATIONS

Do you want simple, reliable deliveries with 100% uninterrupted gas supply? We have pioneered a completely customized solution to meet the unique requirements of specialty gas users. We call it Proactive Cylinder Management.

Through Proactive Cylinder Management, Red Ball TGS can deploy our exclusive Telemetry system which we use to remotely monitor and manage our customers' critical gases like high usage calibration gases, carrier gases, and daily CEMS gases.

Proactive Cylinder Management will benefit you with a reliable supply of high integrity gases and reduced inventory costs, delivery costs, and transaction costs. For our CEMS customers, it is a great tool to help them stay in compliance with their air permit.

FEATURES AND BENEFITS

Remote Monitoring:

Red Ball can remotely monitor and manage our customer's critical gas inventory with our exclusive Telemetry technology.

Secure Management:

Real time critical gas pressures are uploaded to a secured website for our customers to view readings 24/7.

Email Alerts:

Low pressure Email Alerts to notify customers of pressure drops and trigger gas reordering.

Critical Data:

Gas usage graphs are available on-line to monitor daily, weekly, monthly, and annual gas usage. Daily usage graphs also provide customers the ability to identify system leaks.

RELIABLE AND EFFECTIVE AT:

- Eliminating cylinder outages
- Preventing loss of cylinders
- Eliminating order lead times
- Reducing transaction costs
- Reducing cylinder rental expenses
- Eliminating expiration of cylinders
- Reducing excess stock
